SUMMARY

AI-systems engineer who builds and evaluates: wrote a zero-GPU evaluation harness for a local RAG pipeline, built Moltbet — the hackathon-winning on-chain prediction market for AI agents — and ships production LLM agents at ATOM-GROUP. Five years of full-stack and open-source experience. Seeking AI training and evaluation contracts: reviewing model outputs, writing reference implementations and rubrics.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Solidity
AI / LLM	LangChain, LangGraph, RAG, multi-agent orchestration (DAGs), structured outputs (GPT-4), Ollama, eval harness design
Frontend	React, Next.js, React Native, Tailwind CSS
Backend	NestJS, Express, Hono, FastAPI, REST + WebSocket (Socket.IO), Swagger/OpenAPI
Databases & Infra	PostgreSQL, MongoDB, SQLAlchemy, Drizzle ORM, Alembic, Redis, Docker, Vercel
Web3	Solidity, Hardhat, EVM chains, blockchain indexing, TON (Telegram Web Apps)
Fintech	Payment gateways (Paystack, Stripe), wallet and escrow systems, P2P lending flows, USSD applications

SELECTED ENGINEERING PROJECTS

QwenWeaver — Visual Multi-Agent AI Orchestration Platform

`TS · React 19 · Hono · React Flow`

Qwen Cloud Hackathon — "Agent Society" track

- Built a canvas-based platform where developers compose AI agent teams as directed acyclic graphs (DAGs), configuring communication channels between specialist agents.
- Implemented automatic topological parallelization for workflow execution with real-time streaming output, and a conflict-resolution step that judged and merged competing agent responses against task criteria.
- Built an AI copilot that generates and modifies workflow graphs from natural-language goals. Public demo: youtu.be/rWAoW_FgRBY

Citation-Backed Local RAG System with Evaluation Harness

`Python · BM25 · Ollama · Kaggle T4 x2`

- Designed a retrieval-augmented generation system running entirely on local models with no API keys, producing answers with verifiable citations.
- Wrote a zero-GPU evaluation harness — defined the rubric for a supported citation and a justified abstention, then measured retrieval quality, citation accuracy, and refusal behavior against it — alongside a 225-test suite.
- Built measurement scripts for BM25 build time, embedding-cache hit rate, and fp16 vs. fp32 embedding agreement.
- Engineered a notebook pipeline serving LLMs via Ollama on free Kaggle GPUs over a Cloudflare tunnel.

Sigil — Local-First Autonomous AI Agent Platform for Solana

`TS · LangGraph · Solana · npm`

- Built a local-first, multi-agent agent platform for Solana Devnet and published it to npm (`sigil-wallet`), with autonomous agents managing SPL tokens through LangGraph reasoning loops.
- Architected a tri-head interface (CLI, terminal UI, local web dashboard) and an isolated wallet layer that keeps private keys in the OS keychain, never touching the cloud.
- Enforced hardened guardrails: every agent action is vetted against user-defined limits (e.g., per-trade caps) before execution. Demo: youtu.be/PFZNtC4M3-A

Moltbet — On-Chain Prediction Market for AI Agents `Solidity · Hono · Next.js · Turborepo`

- Designed a protocol where autonomous AI agents propose, counter, and settle bets on verifiable events without human intervention, earning on-chain reputation based on accuracy and honesty.
- Implemented decentralized dispute resolution, blockchain indexing, and a programmatic CLI for agent participation; built a Next.js analytics dashboard.
- **Awarded 1st Place (Virtuals Track) and 2nd Place Overall at the SF Agentic Commerce x402 Hackathon** (Feb 2026) — full details under Achievements.

PROFESSIONAL EXPERIENCE

Software Engineer — ATOM-GROUP *Feb 2026 – Present*

- Build AI-powered applications end to end: FastAPI + SQLAlchemy backends on PostgreSQL with Redis-backed task queues, Dockerized and production-deployed.
- Develop LLM agent workflows with LangChain/LangGraph (OpenAI-compatible models) powering conversational product assistants.
- Contribute to AI avatar and real-time interaction features, including talking-head avatar realism and natural-listening UX.

Backend Developer (Volunteer) — YorubaEcho.com *Remote · 2025*

- Designed and built the RESTful API layer consumed by web clients: **90+ endpoints across 20 modules** (auth, media, proverbs, dictionary, learning, marketplace, and more).
- Architected database schemas with performance optimization and managed production deployments on Render.
- Collaborated across frontend/backend to ship complete features end to end.

Frontend Developer — SabiRent *Remote · 2025*

- Built responsive web interfaces against RESTful backends, implementing real-time updates for improved user engagement.
- Profiled and resolved cross-browser and performance issues on production pages ahead of release.

ACHIEVEMENTS

- **SF Agentic Commerce x402 Hackathon (Feb 2026)** — Moltbet: **1st Place, Virtuals Track** (Best Trading/DeFi/AI Agent) and **2nd Place Overall** (Best Agentic App/Agent) among 86 builds from 324 hackers; tracks by Coinbase, Google, Virtuals, SKALE.

EDUCATION

B.Sc. Biochemistry — Obafemi Awolowo University, Ile-Ife *2025*

Biochemistry foundation (molecular biology, enzymology, metabolism) — strongest reviewing biology and biochemistry question-answering, plus adjacent science domains.

ALX Software Engineering Programme — ALX Africa *Certificate · 2022 – 2023*

Intensive full-stack training — the structured foundation under the five years of work above.
